

## L-Bracket Mounting for Ceiling Panels

\*Installation will require two people.

1. Make a template of the panel/ diffuser size out of cardboard.
2. Take the 1x2x6" wide bracket and mark the desired location of the bracket on the template. For panels under 2" thick or for diffusers, mount the 2" side of the bracket on two parallel edges for 4'x4' panels or smaller with each bracket 6" from the corner.
3. Drill holes in the cardboard to match the holes in the brackets.
4. Hold the template up or tack it in place for where the panel/ diffuser is to be mounted.
5. Mark the holes on the ceiling.
6. Remove the template.
7. Attach the angle brackets using the appropriate anchors for the type of ceiling you are attaching to.
8. Once the brackets are securely mounted to the ceiling, slide the panel/ diffuser in the bracketed space.
9. Using self tapping tek screws, screw through the bracket holes into the side of the panel/ diffuser.
